Form Journal #3 2x2

This project im pretty nervous for Ive never built any thing like this

Our beach model looks nice but building it is a different story.

We calculated our dimensions and were going to need like 20 2x2s

Supplies acquired

Alot of these pieces are warped were gonna need to compensate for the warp

Our pieces are around 1.25 inch width so we need to compensate for that too.

Just measured out the 12 6ft pieces were supposed to sit on now time to handsaw! :)

Weve decided that not all of our supports are necessary so were gonna get rid of the middle supports for now and well add them if needed

legs finished they look a little wonky but they work.

Basic beach without supports done, we are still adding side supports.

side supports added

Journal

the bench is pretty sturdy time for the sit test

Bench passed the sit test now to see if it can hold both of us

Bench can hold both of us, success

Pretty happy with how it turned out.
